Assignment 8

There will be a very light "assignment" for this week, as we are preparing to launch the experiment.

1. Brainstorm the name of our domain. Due: TUES, April 7.

What should our domain be called ? "quizdoms.com" ? "wisdomofcrowds.stanford.edu"?
Please upload your ideas and vote on the domains you like here: http://www.tricider.com/brainstorming/37QFwqhZIV3

A few points to note:
- There may be a possibility to use ".stanford.edu".
- Before submitting an idea, please **check that the domain is not already taken**:
- stanford.edu domains:
  - type in the domain on your browser
- general domains (eg. ".com")
  - check here: http://www.register.com/

2. Checker file

The files on github will be the final versions that will be uploaded to the platform. As such, it is crucial that we have a polished version of each folder with no mistakes that can be smoothly uploaded to the platform. Some of the folders are still not in perfect shape, so we have created a "checker file" in order to facilitate a thorough final check of all folders. Each team will be assigned two items to check and will be responsible for checking ALL Github folders for this specific item.

link:
https://docs.google.com/spreadsheets/d/1RiJDdbh1QFkjzJpxW7nuMO1zqJRmbdpK8Xg9yVvC1YA/edit#gid=1584722480

Please complete the following :
- Find your github folder, and enter your team name and emails of your team members in the "Contact Emails" column (some team membership have changed).
- Find the two columns (items) your team is responsible for checking. This is indicated in the "Checkers" row (top two rows).
- Check all github folders for the item you've been assigned to and mark "x" for the folders that have errors or "o" if it is complete.
